Installation guide for OxOffice Online v4 Community on Rocky Linux 8 in PVE LXC

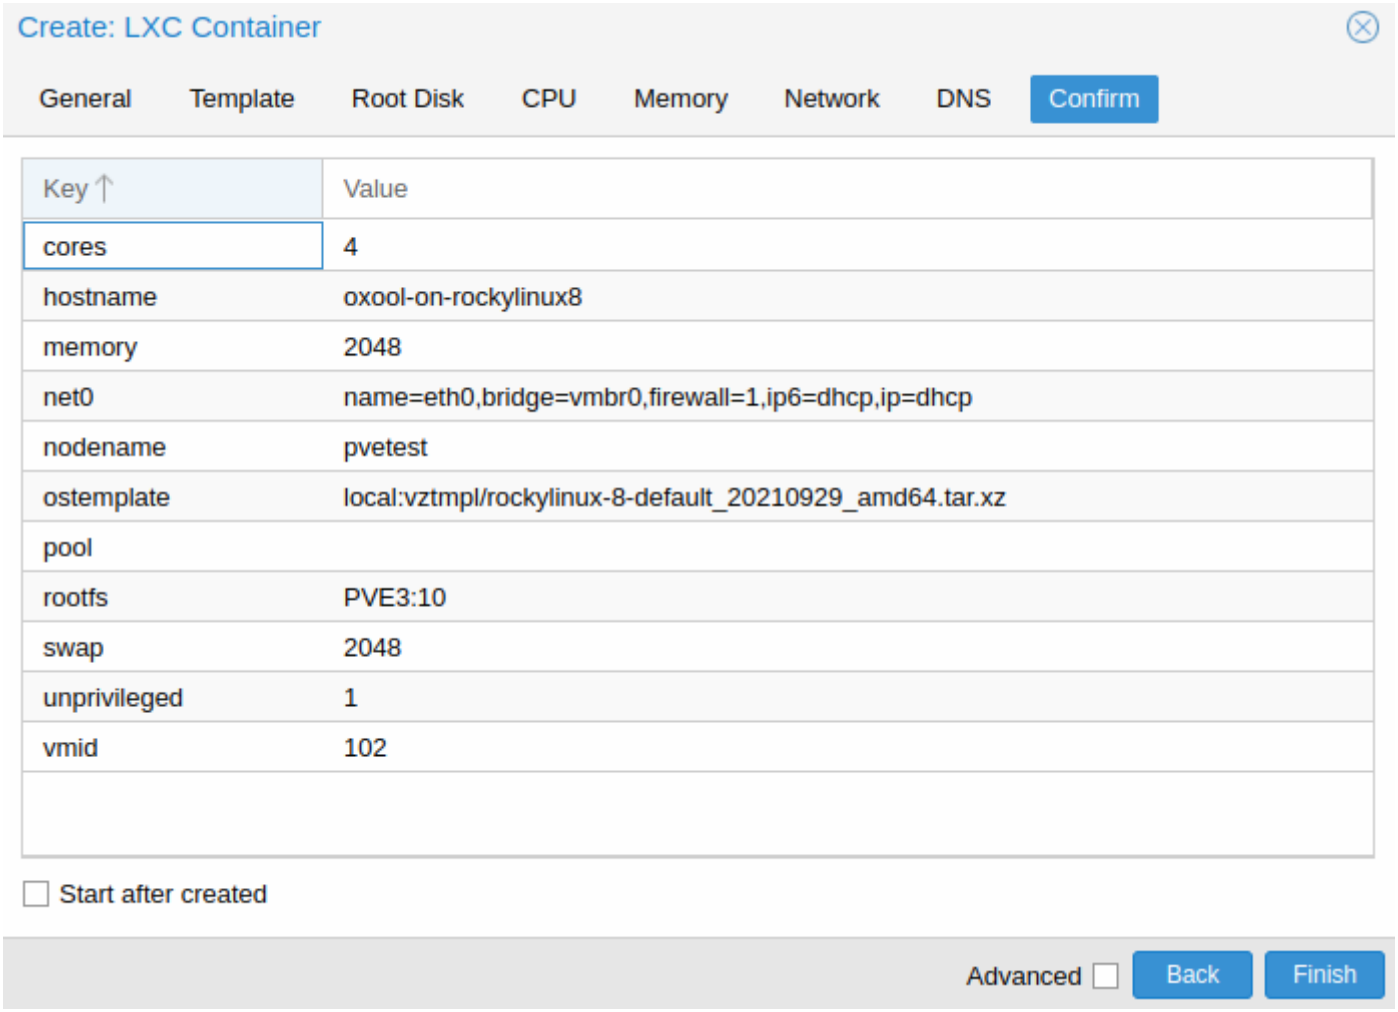

Please download "rocktlinux-8-default" LXC template on your PVE first

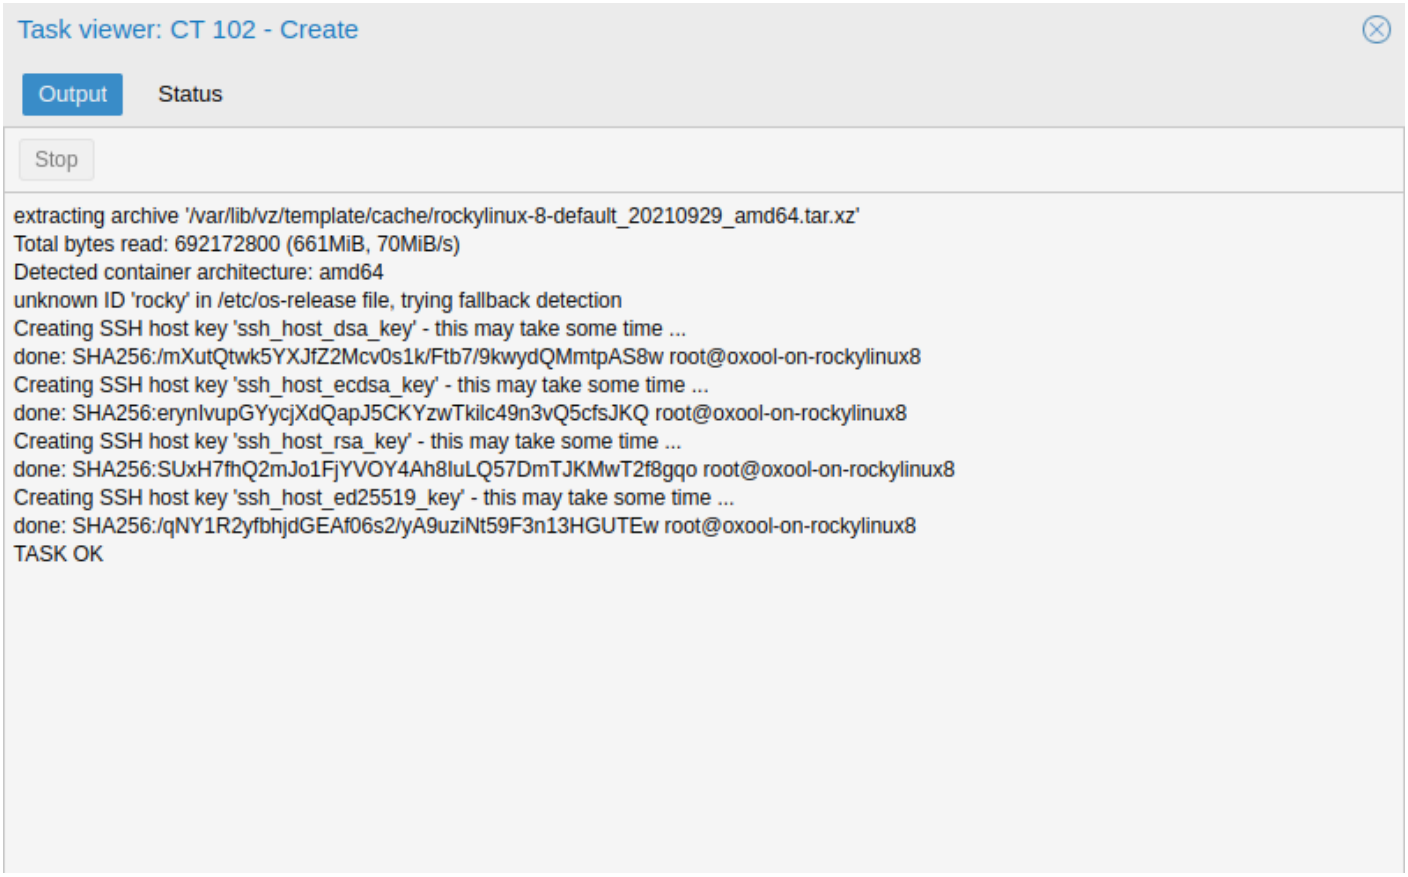

You can see Rocky Linux 8 LXC template in "CT templates" section

Create a new CT using "Create CT" button

Start created CT, login as root and excute following commands to install needed programs and OxOOL Community edition:

```
dnf config-manager --set-enabled powertools
dnf install vim openssh* net-tools unzip wget -y
cd /etc/yum.repos.d
wget http://www.oxoffice.com.tw/rpm/el/oxool-community-v4-el8.repo
dnf upgrade -y
dnf groupinstall "OxOOL Community Group" -y
```

Start OxOOL Community edition service when booting and reboot

```
systemctl enable oxoolwsd
reboot
```

Check if OxOOL Community edition starts normally

```
netstat -tlnp
```

You should get some results like this:

```
tcp6       0      0 :::9980□□               :::*                    □LISTEN     644/oxool
```

P. S. When steps above are finished, you can use "More"→"Convert to template" to generate new LXC template that contains OxOOL Community edition.
